References in Africa for the usage of NovoCrete® a product of OPiS AG

Dear Sirs,

NovoCrete® (a mineral based powdery cement additive) is an innovative product and can be applied in the field of soil stabilization/hydraulic bound base layers as an additive to strengthen road/rail base courses for infrastructural development works. In this regard, there have been performed several projects in different countries and areas of Africa with our product. In the following we would like to name some of them:

- Cameroun: Port Douala area; roads - 2020, 2022 - 2024
- Ivory Coast: roads and areas - 2018, 2020
- Gabon: Coco Beach road - 2010
- Nigeria: Osun State Roads (World Bank) - 2018, 2019, 2020

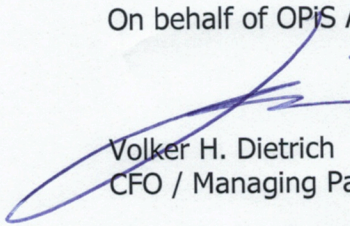

But also did some successful test sections in:

- Ruanda: Test Section - 2015
- Sudan (North): Test Section - 2019
- Uganda: Ntinda Test Section - 2015

However, today after COVID 19 OPiS AG mainly focusses on the following countries: Cameroun, Ivory Coast, Nigeria, and Gabon with its local partners.

Yours sincerely,

On behalf of OPiS AG

Volker H. Dietrich
